

Some hints you may use Winter Quarter, 2008

If you are having problems using the SimNet website, try using the following steps I received from the publisher.

“Before starting SimNet for Office 2007 be sure to check your Internet Explorer settings:

- On your internet browser (IE), please go to Tools, Internet Options, Under General click on Delete, click on Delete Files and Delete Cookies. Click Close and OK.
- Go to Tools, Internet Options, Under General and Browsing History click on Settings, Increase the Disk Space to use to at least 100MB. Click OK and OK.
- If the college is scanning every incoming file with a virus protection program , that could significantly slow down the loading process . Users may want to exclude files coming from your SimNet 2007 school url.
- Please add <https://cotc.simnetonline.com> to the trusted sites list in IE.”

- **Mary Rossman, Mc-Graw Hill**

Special note: If you continue to have issues using the SimNet website, try installing Mozilla Firefox as your internet browser. Here is a link to access a free download: <http://www.mozilla.com/en-US/firefox/> .
